

The global landing gear company

touchdown...

World leader

Throughout the world, Messier-Dowty has become renowned for providing innovative landing system solutions to the challenges presented by a fast-moving aerospace industry. Such credentials however, do not come about overnight. Backed by 70 years experience in the design and manufacture of landing gear, and by one of today's leading aerospace

companies, the Snecma Group, Messier-Dowty is without question, a world leader in its field.

With more than 16,000 aircraft making over 30,000 landings every day on Messier-Dowty gear, the company's expertise remains unrivaled. Whatever the aircraft – from commercial to military, regional to business – Messier-Dowty offers a unique three-fold combination of engineering, manufacturing and support capabilities.

Spanning a workforce of 2,900 employees, Messier-Dowty's cross-functional company structure is divided into three business units:

**Airbus,
Boeing & Military and
Regional & Business.**

These business units form a seamless, customer-focused organization, enabling clients to interface directly with the most appropriate people within the company throughout the entire lifespan of any aircraft program.

Experience

Business units and programs

Thanks to a wealth of experience on Airbus commercial jets, Messier-Dowty has a trusted and proven core competency in the large landing gear business. But Messier-Dowty equipment is not limited to just large commercial aircraft. The company manufactures and supports landing gear on over half of the world's regional and business aircraft programs, including Bombardier's Global Express and Continental Business Jet, as well as the complete family of Dassault Falcon jets.

In the military sector, Messier-Dowty is contributing to the world's most advanced military programs, including Boeing's F/A-18 E/F, Eurofighter Typhoon and Dassault's Mirage and Rafale.

Messier-Dowty also plays its part in helicopter and tiltrotor programs, supporting the Eurocopter Tiger, V-22 and BA 609.

Engineering capability

Backed by an engineering staff of over 300, Messier-Dowty's design capability uses the most advanced CATIA and analysis software and best practices such as concurrent engineering. In addition to design and testing, the company invests significantly into research and development, in order to provide customers with the most robust and technologically advanced equipment available.

Systems philosophy

Messier-Dowty's participation in aircraft program management extends beyond just delivering a set of landing gear. The company's landing systems approach offers airframers a single source for their needs, generating considerable time and cost savings in design, technical interface and supplier management. Messier-Dowty coordinates and integrates landing gear sub-systems provided by specialist partners, which benefit the airframer by reducing management responsibilities, lead times and acquisition costs. This approach has earned the confidence of major airframers such as Dassault and Bombardier.

Customer services

At Messier-Dowty quality customer service means meeting the needs of customers from the initial design phase through the full lifecycle of every program. The company's customer services network is ready to respond to operators anywhere in the world on any aircraft with Messier-Dowty landing gear, providing spares and technical support in the field, as well as MRO services in each of the major regions of the world.

Customer support centers

All commercial aircraft operators have direct access to Messier Services Customer Support Centers based in Asia, Europe and North America, which provide a global, on-line spares network and engineering support 24 hours a day. Military operators are supported by specialists based at Messier-Dowty manufacturing facilities who are on-call to provide rapid response.

Michael Hall

Global repair and overhaul

Messier Services provides a comprehensive repair and overhaul service for landing gear and hydraulic systems. It has extensive facilities in Asia, Europe and North America, capable of servicing the full range of landing gear, from widebody long-haul aircraft to business aircraft.
